

New Partnership enables customers to replace discontinued ZF Clutch & Brake Products

Heid Brakes & Clutches

新伙伴HEID提供客戶更換停產的ZF牌離合器和煞車器

- Electrically operated single and multiple disc
- Electrically operated single face designs
- Safety brakes & clutches (for NC feed drives)
- Tooth clutches
- Hydraulic and pneumatic options
- Pressure/spring actuated models

ZF's agreement with Heid covers the range of clutch and brake products no longer manufactured in house by ZF and other manufacturers. These are at the top end of the torque range and are directly interchangeable with units supplied by ZF in the past, and also with competitive units currently available on the market.

The deal ensures that ZF can provide the widest range of new products and also means the company can service retrofit business on items of equipment such as machine tools which used ZF product as original fitment.

All of the Heid units are technically advanced in design, compact and robust in construction, the latter ensuring reliability in operation. They also offer the advantages of working from low voltage (24V) supplies – many with the suitability for wet or dry operation – and minimum maintenance requirements.

The agreement with Heid ensures that all customers are now backed-up by the resources of two of the most respected manufacturers of driveline technology in the world through one company.

ZF Industrial is part of the worldwide ZF Group of companies with production centres, partners and representatives on every continent. In the industrial sector, ZF is at the forefront of developments, from individual units to complete systems solutions for all types of machinery and production units, including those in robotic systems and the fast growing factory automation sector.
